

# Are GMOs SAFE? YES.

The National Academies of Sciences, Engineering, and Medicine 2016 report reaffirms

Over **900** studies and publications were examined

**20+** scientists, researchers and agricultural and industry experts over a 2 year period reviewed animal studies, allergenicity testing, North American and European health data, and more

Based on **20+** years of data since GMO crops were introduced

# SAFE.

No substantiated evidence of a difference in risks to human health between current commercially available genetically engineered [GMO] crops and conventionally bred crops.

# Can GMOs HELP PROTECT THE ENVIRONMENT?

THEY ALREADY DO.

Contrary to myths about GMOs hurting the environment, GMOs allow farmers to preserve the land while doing more with less resources

## The Environmental CHALLENGE:

**20%** POPULATION INCREASE BY 2050<sup>1</sup>

HIGHER DEMAND FOR

**FOOD and FIBER** **FUEL**

**2** POTENTIAL PATHS

**1** Convert more land, like forests and prairies, into agricultural production

**2** Use agricultural technologies like GMOs to increase crop yields on existing farmland

GMOs are **ONE SOLUTION**

In 2020, GMOs allowed farmers to use

**57.8 MILLION** less acres of land

to produce the same amount of food, fuel and fiber crops

Without access to GMOs, farmers would have needed to plant an additional:

**21 MILLION** acres of corn **28.7 MILLION** acres of soybeans **6.9 MILLION** acres of cotton **1.2 MILLION** acres of canola to keep up with global production levels in 2020<sup>2</sup>

# HOW DO WE PRESERVE OUR HABITAT?

GMOs ARE ONE TOOL THAT CAN IMPROVE

crop yields by allowing fewer acres to produce the same amount of food. This can help save critical animal and plant ecosystems including

FORESTS

PARKS

PASTURES

**57.8** million acres

In 2020, GMO crops helped preserve 57.8 million acres.<sup>1</sup> That's equivalent to the combined agricultural area of the Philippines and Vietnam!

## IMPROVED ECOLOGY THROUGH GMOs

DECREASES INSECTICIDE USE

Bt crops are designed to allow important, beneficial bugs to thrive, including:

BEEES

BUTTERFLIES

EARTHWORMS

LADYBUGS

SINCE 1996, GM INSECT-RESISTANT CROPS HAVE LED TO A REDUCTION OF INSECTICIDE USE, INCLUDING:

**747 million lbs.** on cotton crops<sup>1</sup>

**188 million lbs.** on maize crops<sup>1</sup>

# What Does GMO Stand For?

GENETICALLY MODIFIED ORGANISM.

A GMO crop is the product of a **precise crop improvement technique** that enables us to take a beneficial trait (like insect resistance or drought tolerance) & transfer it into a crop plant.

GMO also stands for

## BENEFITS:

### ENVIRONMENT

- GMOs help us preserve the land while doing more with fewer resources (e.g., drought tolerant and fertilizer use efficient products).<sup>1</sup>
- GMOs help us reduce food waste (e.g., non-browning GMO apples and GMO potatoes that are less prone to bruising and black spots).<sup>2,3</sup>

### YOU

- LOWER FOOD COSTS** GMOs help us reduce the cost of food.
- GROW MORE FOOD, SAFELY & SUSTAINABLY** GMOs have been proven safe<sup>5</sup>, and over the last 25 years, GMOs have allowed farmers to increase crop yields by 22% and reduced the overall environmental impact of pesticides by 17.3%.<sup>1,6</sup>
- INCREASED NUTRITIONAL BENEFITS** Scientists are working on biofortified GMO crops to help address nutrition deficiency and food security issues around the world.<sup>7</sup>

GMO stands for food that's **safe to eat** and **sustainably to grow**.
